

Addingham Environment Group

Bird Report

2020

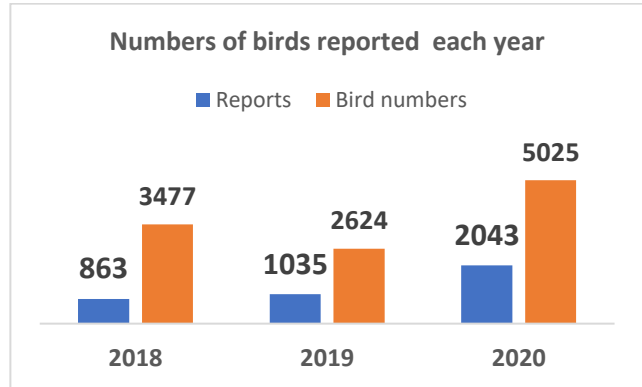

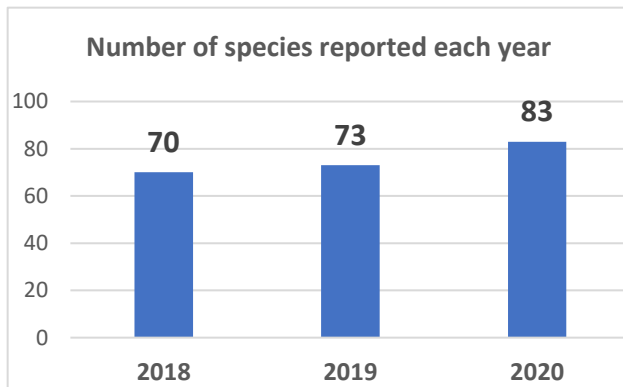

Summary

This is a review of the 2042 sightings of birds reported from in and around Addingham in 2020 (an increase compared with the 1035 reports in 2019). We had 83 different species reported including 8 new to Addingham species. There were 41 species reported from gardens including 10 gardens reporting a Sparrowhawk and 6 reporting a Great Spotted Woodpecker. Forty-one species were reported from along the River Wharfe including Grey Heron, Little Egret and Kingfisher. We also started walking regular monthly bird transects which will enable us to look at trends in species and abundance, in future years.

Overview

This is our third full year of recording the birds identified in and around Addingham. A list of bird species reported during 2020 can be seen in [Appendix 1](#). An overview of where the species were reported can be seen in [Appendix 8](#). The numbers of species reported each year has increased along with the number of reports received. On average we received 170 reported sightings each month during 2020. Thank you to the growing number of residents who contribute. ([See Appendix 9](#))

Over the years we have had 90 different species reported; however, in each of the individual three years we have never had all 90 species reported. In 2020 we had six new species (first time reported in Addingham) see Table 1 and there were 7 species not reported during 2020 (Table 2)

Table 1: New species for 2020	First date reported and location	
Common gull (<i>Larus canus</i>)	22/02/2020	South Field (SE073495)
Common raven (<i>Corvus corax</i>)	20/09/2020	Black Hill, Addingham High Moor (SE072472)
Green woodpecker (<i>Picus viridis</i>)	13/07/2020	R Wharfe, upstream Olicana Park (SE081506)
Hen Harrier (<i>Circus cyaneus</i>)	15/04/2020	Flying over Main Street (SE076498)
Mute swan (<i>Cygnus olor</i>)	08/10/2020	Chelker Res. (SE053516)
Red grouse (<i>Lagopus lagopus</i>)	19/12/2020	Addingham High Moor (SE075471)
Skylark (<i>Alauda arvensis</i>)	17/04/2020	Turner Lane / Cocking Lane (SE063483)
Spotted flycatcher (<i>Muscicapa striata</i>)	13/06/2020	Steg Holes, Addingham Moorside (SE077483)

Tablet 2: Not reported in 2020
Golden plover
Grey partridge
Lesser black-backed gull
Redstart
Snipe
Snow bunting
Stonechat

Gardens

We had reports of 41 different species from 21 gardens and this is an increase from 38 species reported in 2019 (see [Appendix 2](#)). The Blue tit and Long-tailed tit were reported from the greatest number of gardens

Table 3: Species most widely reported from gardens (2020)	No of gardens
Blue tit	13
Long-tailed tit	13
Blackbird	12
Dunnock	11
House sparrow	11
Wren	11
Magpie	10
Nuthatch	10
Robin	10
Sparrowhawk	10

(see Table 3), but interestingly the Nuthatch and Sparrowhawk, birds not usually thought of as garden birds, appear in the top ten. Although it is too early to see any trends in these data, Bullfinches, Blackcaps and Long-tailed tits were reported from more gardens this year than in previous years. On the other hand, Greenfinches reports have gone down. To enable us to monitor trends we encourage you to make regular recordings from your garden. Ideally once a month for 30-60 minutes (with a cup of coffee and a biscuit!) at approximately the same time of day. Record all the species you see. Same format as the RSPB Big Garden Bird Watch. We can provide recording forms if you

want or just send us an email each month with a list of species and number seen at any one time. It is important that you are specific about the species. If you are not sure don't report – ideally take a photo or send us a description. Don't forget to wash your feeder regularly to prevent the spread of infection.

Becks and River Wharfe

We are fortunate having several becks in and around the village. There were 29 different species reported from along and beside the becks ([Appendix 3](#)). This is fewer than the 37 species in 2019. Most reports in 2020 were from Town Beck – it is the longest beck that flows through the village and probably walked along the most frequently. However, we also had several reports from Back Beck and a couple from Marchup Ghyll (before it becomes Town Beck). Pairs of Grey wagtails were seen along Town Beck near Main Street and also near North Street. A kingfisher was reported from Marchup Ghyll, Back Beck and the Saw Mill Pond. As many of you already know the Saw Mill pond is frequented by Mallard ducks. We had a report of 45 all at one time!

We had 46 different bird species reported from along the River Wharfe ([Appendix 4](#)). The river and its banks provide a good environment for a wide range of birds both those associated with water but also for those that are at home in trees, bushes, and scrub. The Grey Heron, Goosander and Mandarin duck have been seen all along the river. A Little Egret was reported by several people during the year with locations ranging from below the suspension bridge to below Low Mill weir. Little Egrets were infrequently seen anywhere in the UK prior to 1989 so interesting that we have at least one resident. We also had a juvenile cormorant reported in November.

Little egret near Low Mill Lane
- Debs Griffiths

Juvenile cormorant
- Anne Clarke

Potential Development / building sites

For the last 2 years we have recorded bird reports that come from areas around the village that were designated potential building sites as part of the Addingham Neighbourhood Development Plan. Although there were 16 original designated potential sites, we had limited reports from most of these sites. We did have a reasonable number of reports from 5 sites ([Appendix 5](#)). This shows a wide range of birds regularly found in South Field, Brogden Meadow and Newlands Field. Including regular sightings of one of the Barn owls in the old Ash Tree in Newlands field. Most people report seeing one Barn owl but there have been some reports of a second also being seen.

Curlews have been reported on 11 occasions from the South Field (Green Belt) area; important because of the national decline in curlews and who doesn't like to hear curlews calling.

Selected Species Locations

Owls

I'm sure most of us have heard owls hooting this winter. The hooting call most of us recognise as an owl is typical of the Tawny owl. The Little owls and Barn owls have a different calls. Although I've heard the Tawny owl hooting, I couldn't see it or tell where it was calling from, so I didn't add it to our records. Below is a list of where various AEG members have reported owls. In 2019 we put up two Barn owl boxes: one in a tree near Cat Steps and the second in another tree a couple of hundred metres north east of Cat Steps. Next time you are walking up there have a look. So far, no reported Barn owls inhabiting the boxes but 2021 might be a lucky year.

Barn owl (<i>Tyto alba</i>)	Little Owl (<i>Athene noctua</i>)	Tawny Owl (<i>Strix aluco</i>)
Field N of Springfield Mt	Addingham Low Moor	Beacon St
Addingham Moorside	Path N of Highfield Farm	Bolton Rd / Bark Lane
Field W of Brogden Fields		Bracken Ghyll Golf Course
Field top Stockinger Ln		Sycamore Dr
Great Meadow		Field W of Brogden Field
Newlands Field		
Addingham Low Moor		

Upland waders

An important group of species that includes Curlews, Oystercatchers, Lapwings, Golden plovers and Snipe. We had no reports of Golden plovers or Snipe in 2020 but good sightings of the other three.

Curlew (*Numenius arquata*)

Nationally curlews are in decline, thought largely to be the result of loss of habitat (they like rough pastures and moorland bogs). We had 39 reports of curlews in and around Addingham. Mostly the birds were seen flying over fields. It is important we record where they land, feed and nest.

Table 5: Areas in and around Addingham where curlews have been reported	
Addingham Low Moor	6 reports
Bracken Ghyll Golf Course and surrounding fields	3 reports
The Street area and surrounding fields	3 reports
Addingham Moorside	5 reports
R Wharfe below High Mill and surrounding fields	3 reports
R Wharfe above High Mill and surrounding fields	4 reports
Cricket fields and surrounding fields	4 reports
South Field, Brogden field and nearby fields	11 reports

Oystercatcher (*Haematopus ostralegus*)

Oystercatchers are another upland wader that is in decline because of loss of habitat. We had 14 reports in 2020 which compares with only 8 reports in 2019.

Table 6 Areas in and around Addingham where Oystercatchers have been reported	
R Wharfe above High Mill and surrounding fields	6 reports
R Wharfe below High Mill and surrounding fields	5 reports
Addingham Low Moor	2 reports
Addingham Moorside	1 report

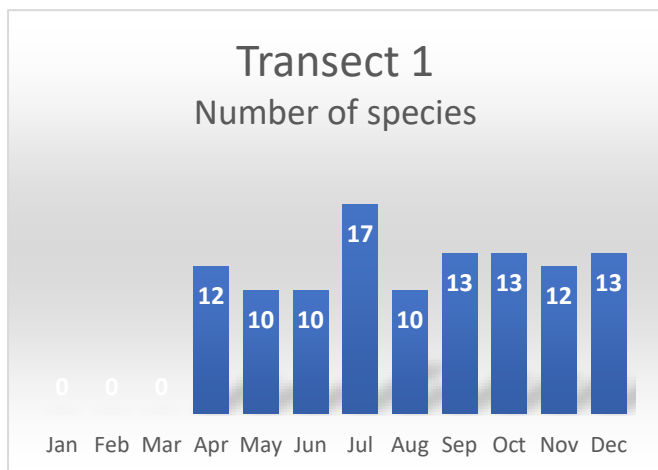

Lapwings (*Vanellus vanellus*)

12 reports of Lapwings in 2020. Some of these reports were of reasonably large numbers (40+).

Table 7 Areas in and around Addingham where Lapwings have been reported	
Addingham Moorside	3 reports
Addingham Low Moor	6 reports
Fields near Chelker reservoir	2 reports
Cricket pitch and surrounding fields	1 report

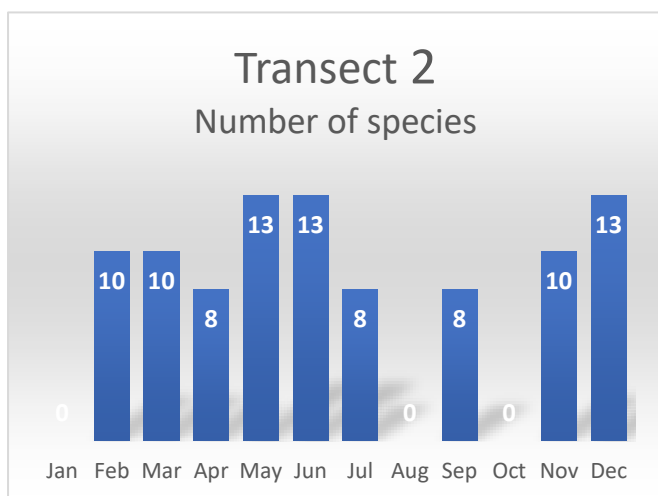

Bird Transects

A transect is a path / walk along which one counts and records occurrences of species. We have started some regular monthly bird transects to enable us, in future years, to look at trends in the number of species and their abundance. Many thanks to the small group (Malcolm Secrett, Lesley Loughlin and David Austin) who undertake Transect 1 and to Peter Miller for Transect 2 data. Over the year we have had reported 27 species from Transect 1 ([see Appendix 6](#)) and 27 species from Transect 2 ([Appendix 7](#)).

Route

Saw Mill Lane
Saw Mill Pond
Bolton Road in front of Primary School
Path around Primary School playing fields
Back Beck Lane near Bridge 55
Sugar Hill

Route

Path behind The Sailor pub
Along the side of Great Meadow / Newlands Field
Hollow Lane
Along the side of South Field
Along the top of South Field to Browsfield Road

We are hoping to set up some more regular bird transects in 2021.

Appendix 1: Bird species reported from in and around Addingham during 2020

<i>Species (Common name)</i>	<i>Species (latin name)</i>	<i>Species (Common name)</i>	<i>Species (latin name)</i>
Black-headed gull	<i>Chroicocephalus ridibundus</i>	Linnet	<i>Linaria cannabina</i>
Blackbird	<i>Turdus merula</i>	Little egret	<i>Egretta parzetta</i>
